

T.A.P. TRADER

Welcome to the Future of Futures Trading!

Hello, I'm Frank Birch, CEO of Systemstraders. It's with great excitement that we unveil our innovative mechanical plugin: TapTrader. TAP stands for "Time & Price," which forms the foundation of our revolutionary trading solution, designed to operate tirelessly five days a week.

What Sets TapTrader Apart?

TapTrader stands alone as the first fully automated system engineered to enhance your trading capabilities in Globex Futures. This system offers seamless trading experiences across a wide range of contracts, specifically targeting symbols like 6A, 6B, 6C, 6E, 6J, ES, NQ, RTY, and YM.

Precision and Advanced Automation

Our plugin integrates perfectly with OmniTrader, channeling trades directly through OmniPilot to Interactive Brokers. This ensures not only automated but also strategically aligned trading with market dynamics around the clock on a 15-minute data timeframe.

The Science Behind TapTrader

TapTrader's distinction lies in its pioneering use of Fibonacci Price Ratios and Fibonacci Time Sequence to pinpoint trades with high accuracy. By leveraging these mathematical concepts, TapTrader identifies key turning points in the market, enabling you to buy or sell at optimal prices. Additionally, it employs the Lucas Time Sequence, a lesser-known but powerful tool, to enhance the timing of trades.

Expanding Horizons

While currently centered on futures, we're excited about the potential to customize TapTrader strategies for every 24-hour traded market. With 27 innovative strategies now trading 24/5, TapTrader is at the forefront of trading technology. Stay a step ahead with TapTrader, where cutting-edge technology meets market acumen.

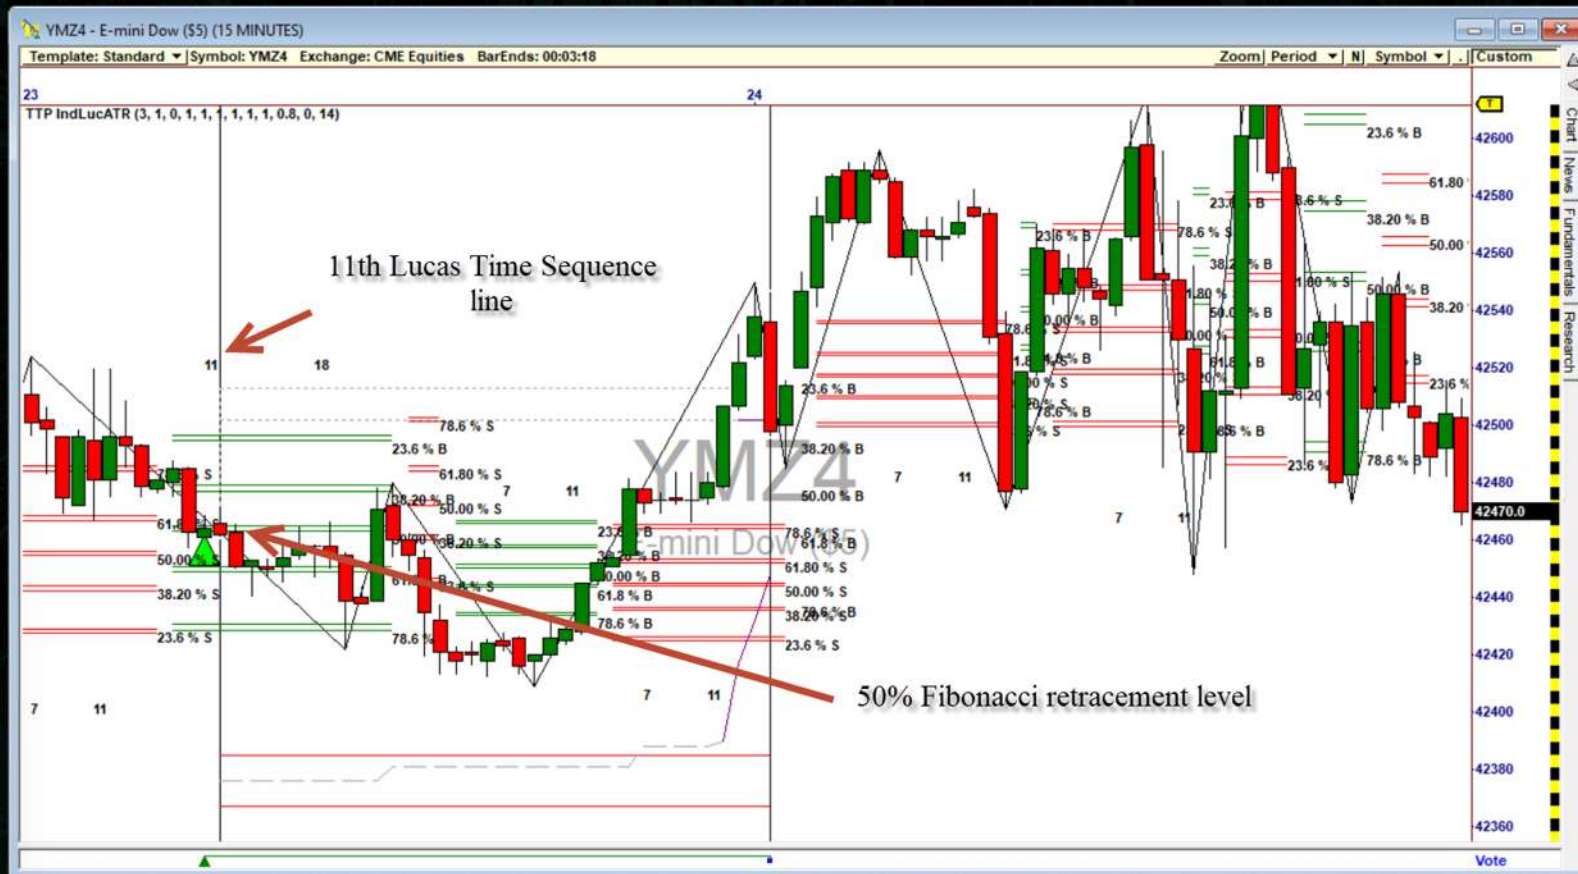

Impressive Results

Let's dive into the compelling outcomes—here's a look at the futures equity curves, demonstrating the robust performance of our strategies.

These results are not just theoretical; they mirror real-world trading conditions, incorporating a slippage and commissions cost of \$15.00. Beginning with their inception on November 22, 2021, these strategies have been rigorously tested over a two-year backtest and a subsequent two-year forward test using out-of-sample data, consistently yielding stellar results.

Trades Overview

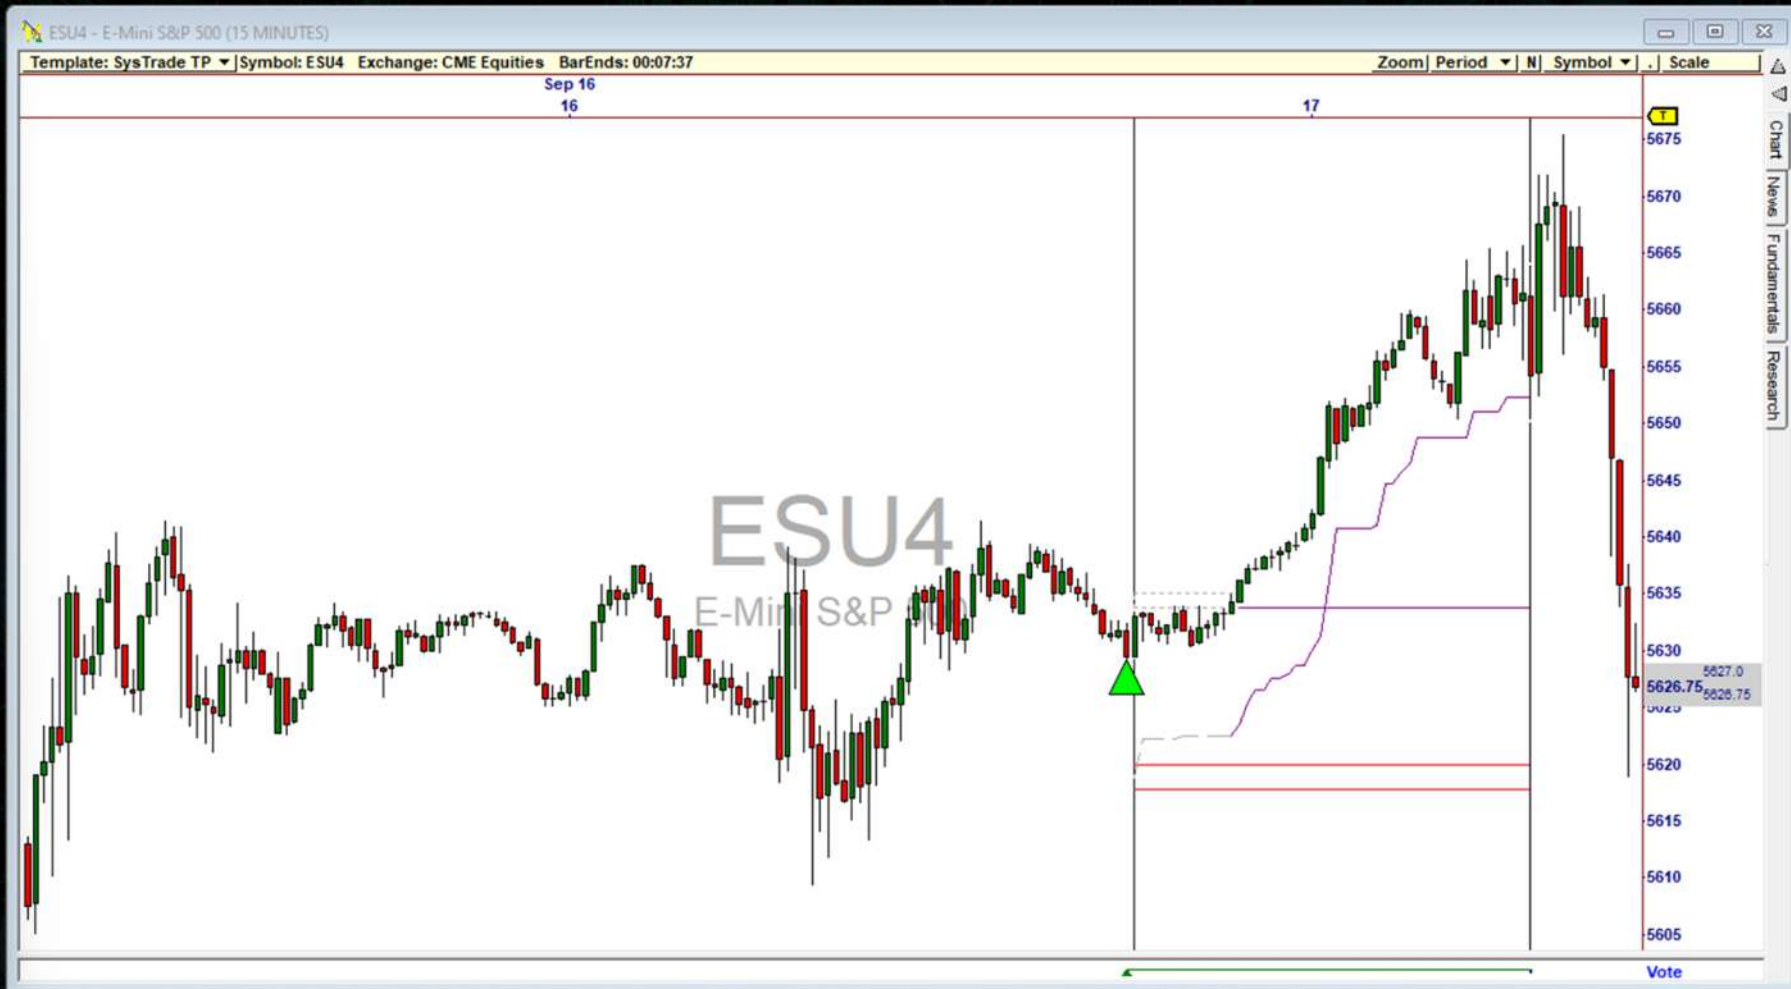

Take a look at this chart for the YM, where the indicator is overlaid. You can clearly see how the 11th Lucas time sequence and the 50% Fibonacci ratio align perfectly with price, signaling a long trade that resulted in a +36 point gain.

Trades Overview

TapTrader triggers signals for both long and short positions, starting with a successful short trade on the 6A.

Trades Overview

Additionally, here's an excellent example of a long trade on the ES, capturing a 25-point gain.

Performany Summary Report

Performance Summary Report

Strategy	Profile	Periodicity	Symbol
All Strategies	TapTrader Futures (Test) 15M	15 Minutes	ALL SYMBOLS

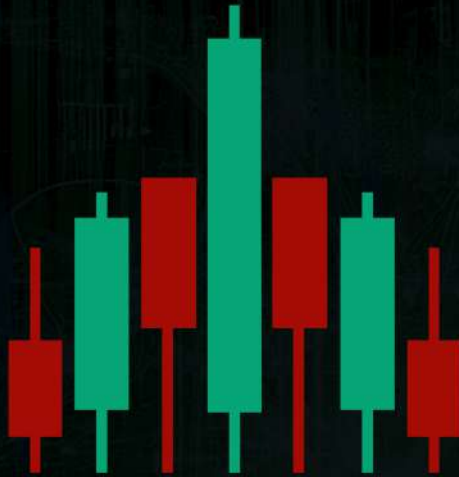

All Trades: All Strategies

Abbreviation	Statistic	Back Test	Forward Test
NT	Number of Trades	727	707
