The ONLY Trading System with a
One-Year Money Back Guarantee!

For the Trader Serious about Building Wealth

The Path to Trading Success Starts Here

"This product will put money directly in your pocket!"
-Ken Holmes

The key to building wealth is to make consistent gains regardless of what the market is doing. You need an investment Strategy that can make money in bear markets, bull markets, sideways and volatile markets.

We are Nirvana Systems and we've been building advanced trading technology for over 20 years for traders and investors all over the world. Recently we discovered a technique for generating Trading Signals that is so powerful, and so profitable that we have given it our highest honors—Nirvana Systems Proprietary or NSP status.

How many Trading Strategies can generate profitable Signals year after year, in any market, and on any list? NSP-41 may very well be the first of its kind in the world. NSP-41 has tested out to be highly profitable on stocks in the S&P, the NASDAQ, and the Russell—in fact it is profitable on all lists we have tried it on back to 2000. It even works on futures and ETFs!

NSP-41 comes with OmniTrader Professional, our automated trading software platform AND our unmatched One-Year Guarantee! If you are interested in building wealth automatically, you owe it to yourself to learn more about NSP-41.

Nirvana Systems Inc., Headquarters in Austin, Texas

"I have been a profitable, full time trader for four years now. A large part of this success I owe to Nirvana Systems."

- Bill Graves

What is NSP-41?

Nirvana Systems was founded in 1987 for the explicit purpose of developing automated trading technology for individual investors. Over the past 23 years, we have built a solid reputation for providing quality products that are more automated and more powerful than anything else on the market. And now, we've outdone even ourselves!

The Power of Advanced Trading Technology

NSP-41 is the latest proprietary automated Trading Strategy released by our Labs. Many Trading Strategies are designed for one specific type of market, which means they can easily fail when confronted with sudden changes in trend or volatility.

NSP-41 handles today's changing markets. It buys in uptrends and if set to do so, it can sell short in down trending markets. The Strategy compares short term price movement to the longer trend, looking for opportunities to exploit. It can also recognize opportunities in flat or sideways markets and take advantage of them.

Withstanding the Test of Time

We've been building Trading Strategies for a long time and we know how to test *and* validate them. NSP-41 has been verified on over 10 years of "out of sample" data. We tested it against a large number of lists (see 10-year equity curve, pages 6-7). NSP-41 has proven itself to hold up across all market environments.

Guaranteed to Perform

We take the business of building Trading Strategies very seriously, and we believe in what we sell. That's why we offer our unprecedented 90-Day Unconditional Guarantee and an unheard of One-Year Performance Guarantee (see details on page 11). But we also want to protect those who use the Strategy from the pitfalls of over trading. That's why we have a limited number of copies available. Once we've sold the 300th copy of NSP-41, it will be taken off the market.

"The strategy is easy to run, easy to implement and only requires a few minutes of your time a day. As a matter of fact it is so easy that you might feel cheated by its simplicity. But the results speak for themselves."

- Thomas Helget

Any Market. Any List. Any Trading Style. It Just Works!

The period from January 1, 2008 to June 1, 2010 was one of the most challenging market environments we've ever seen. Indeed, a good many fortunes were lost in the economic downturn of 2008, as seen in the chart of the S&P 500 to the lower right.

But look at the equity curve for NSP-41 during this period. As the market pushed lower and lower, NSP-41 actually MADE money during this period. Then, when the market finally turned the corner in March 2009, NSP-41 automatically detected the new trend and began buying into it, hardly missing a beat as it went to new highs. The score: NSP-41, Up 137%, S&P 500, Down 25%. It's safe to say NSP-41 is a winning Strategy.

The goal of the Strategy is to make consistent, small gains while staying diversified. This keeps it nimble and ready to react to a sudden market event. That's why it doesn't suffer the same draw downs as the overall market—it's amazing!

NSP-41 vs. the S&P 500 (2008-2010)

Consistent Gains Year After Year

NSP-41 has made gains every year in the past 10 years in simulated trading. The key to this remarkable performance is the Strategy's ability to prosper regardless of market conditions. Bull market, bear market, volatile or calm, NSP-41 consistently profits while beating the general market.

The equity curve to the right reflects simulated performance on the stocks in the S&P 100 compared to the performance of the S&P 500 Index. Even when the general market is losing ground, NSP-41 continues to post gains and reach new equity highs.

Works on Any Symbol List

The equity curve to the right was generated using a trading simulation on stocks in the S&P 100 list. But NSP-41 is equally impressive on other indexes, including the S&P 500 and Russell 1000 (see below).

Never before has a Trading Strategy been available with this level of flexibility or performance. NSP-41 has the firepower to help you achieve your wealth building goals.

Average Annual Gains Over Past 10 Years

Symbol List	Annual Gain
S&P 100	28%
Russell 1000	31%
NASDAQ	23%
S&P 500	20%

10 Years of Profits!

NSP-41 Matches Your Trading Style

No matter what your investment objectives, NSP-41 can help you reach them.

Aggressive Traders: Do you trade with full margin on both the long and short side of the market? NSP-41 has shown a consistent ability to generate very high returns with low draw downs in aggressive trading.

The "Typical" Investor: Most investors trade on the long side only, but are willing to use margin if opportunities are available. NSP-41 gives these investors what they need to maximize their portfolio returns.

Conservative Investors: Many investors are willing to trade the short side of the market, but refrain from applying additional leverage through the use of margin. Trading in this mode, NSP-41 has generated solid profits at far lower risk than a buy and hold approach.

Retirement: Even though neither shorts nor margin can be used in a retirement account, NSP-41 has shown the ability to generate solid steady gains.

Approach:	Long	Short	Margin	Annual Gain*
Aggressive	✓	✓	✓	28%
Typical	✓		✓	14%
Conservative	✓	✓		10%
Retirement	✓			7%
